

At the completion of this course, participants will be able to understand:

- Various edentulous treatment options including implant-assisted and implant-supported restorations
- How to identify the best treatment option based on individual patient needs and expectations
- The importance of diagnosis, communication and treatment planning
- The benefits of new edentulous treatment options including patient-specific friction-retained prostheses and screw-retained fixed hybrids on a minimum of 4 implants
- How to simplify and increase the predictability of fixed and removable cases
